A Deep Dive into Zomato's Customer Segments

Exploring customer segmentation and how it impacts restaurant performance across various regions.

A Deep Dive into Zomato's Customer Segments

Problem Statement

Zomato faces challenges in identifying and targeting its most valuable customer segments. While some users—such as students—exhibit high spending despite lower income, others engage less frequently but spend more per transaction. Without clear behavioral and demographic segmentation, it is difficult to develop personalized marketing strategies that boost engagement and retention.

RECOMMENDATION

Value-Based Campaigns for Students (18–25):
Students are high spenders despite lower income, indicating strong app engagement. Therefore Introduce bundle deals, student discounts, or subscription-based savings plans (e.g., Zomato Student Pass) to reward loyalty while managing affordability.

Loyalty Programs for High-Spend Segments:
Encourage repeat usage among high-spend users (especially students and older professionals) through points-based rewards, cashback offers, and exclusive early access to deals.

Occupation-Aware Marketing:
Tailor campaigns to key occupations—e.g., "Midday Meal" offers for professionals, "Late-Night Cravings" for students, and family combo discounts for older age groups.

City-Specific Strategy:
Leverage top-performing cities for localized promotions. For example, create regional challenges, referral programs, or app gamification (e.g., leaderboards for foodies in Mumbai).

Restaurant Personalization by Age Group:
Curate homepage feeds or push notifications based on age-based dining preferences—e.g., premium dining options for older adults.
